EXPERIENCE

AWS AI-ML Intern

March 2023 – May 2023

AICTE-EduSkills

- Built and deployed end-to-end machine learning pipelines on AWS (S3, Lambda, EC2) including data preprocessing, feature engineering, and model deployment
- Improved model accuracy by 15% through hyper-parameter tuning on datasets exceeding 10,000 data points

PROJECTS

Stock Market Monitoring App

March 2025 - May 2025

A backend system to manage portfolios of stocks, track prices in real time, and calculate performance

Tools & Technologies Used: Java, Spring Boot, Spring Data JPA, MySQL, Maven, REST APIs

- Developed a backend system using Java and Spring Boot, allowing users to create and manage stock portfolios with secure, JWT-based user authentication
- Integrated with third-party financial APIs to fetch live stock data and implemented scheduled jobs for periodic price synchronization and portfolio valuation
- Engineered the business logic for real-time gain/loss calculations and implemented a notification system to trigger alerts based on user-defined price thresholds

PIB TRANSVID - Transforming PIB Text Articles to Regional Languages Videos

Jan 2024 – April 2024

Developed a Text to Video Conversion System for Press Information Bureau Articles

Tools & Technologies Used: Python, Transformers (BERT), NLP, GTTS, PIL, MoviePy, Streamlit

- Implemented NLP techniques with BERT Transformers to extract key information and ensure accurate content summarization for video scripts, enhancing efficiency and quality of video production
- Integrated GTTS for generating high-quality audio narration in regional languages, synchronized with visual content generated using PIL and MoviePy, resulting in immersive and engaging content
- Built a user-centric interface using Streamlit, to provide a user-friendly experience for content input, language selection and output customization, facilitating seamless interaction and customization for end users

Cyberbullying Detection — LiveDemo

Aug 2023 – Nov 2023

Developed a tweet classification system to distinguish between bullying and non-bullying content on social media platforms

Tools & Technologies Used: Python, Scikit-learn, Pandas, NLTK, Gradio

- Trained and evaluated multiple supervised learning models using **Scikit-learn** and **Pandas**, selecting the **SGD Classifier** for its optimal performance and achieving **87% accuracy** on a dataset of over 40,000 text samples.
- Engineered a full-stack web application by integrating the trained NLP model into a user-friendly front-end interface built with **Gradio**.
- Successfully **deployed** the application as a live, interactive demo on **Hugging Face Spaces**, making it accessible for real-time classification.

SKILL SUMMARY

- Programming Languages:** Java, Python, SQL
- Backend & Database:** REST APIs, JDBC, MySQL, MongoDB
- Frontend:** HTML, CSS, React.js, Swing
- AI/ML Tools:** TensorFlow, Scikit-learn, Pandas, NumPy, Matplotlib, BERT, NLP
- Developer Tools & Methods:** Git, Maven, AWS, OOP, Data Structures & Algorithms
- Soft Skills:** Leadership, Problem Solving, Collaboration, Teamwork, Adaptability

EDUCATION

- MVSR Engineering College, Hyderabad, India**

Bachelor of Engineering in Information Technology

2020 - 2024

CGPA: 7.8

ACHIEVEMENTS & LEADERSHIP

- Published Paper “Advancing Cyberbullying Detection on Social Media Using Machine Learning” at ICACI Conference, Hyderabad (2023)
- Organized and coordinated IEEE club events, enhancing teamwork and leadership within peer groups
